Sales research automation

1 message

John McDougall <jdm@mcdia.com>

To: Sudarshan Sinha <s.sinha2103@gmail.com>

Namaste Sudarshan:

I will get back to you soon on the other stuff.

I have a different task I am not sure if you can help with.

I used to send prospects this overview sheet below of how they compare to the top 100 ish in their state.

Mostly I send an semrush seo top 100 keyword rank chart. Then later a tech audit.

Is it possible to automate even the basic semrush overview of just the chart of the last several years ranking up and down movement if I give you a list of a few hundred law firms? When we find ones with big drps we can get more aggressive seeming to them. I am try best by having the most seo, ai, site speed, tech seo type issues.

And as a second part of it adding 100 or 200 personal injury forms on one sheet like the one below in excel but with modern data point more like ai seo pages score produces (if accurate enough) could also be good. But I oud need the data in ths case to be super acci for seo to show even less data points but more clear ones because our credibility woud go out the window if the data looks wrong.

So even just semrish overview of # of keywords and traffioc value is better than lost of wrong data etc.

In an ideal world I could also show ai overview visibility score. I know ubersuggests gives this away in even low end plans but not sure how to scale that ai visibility hecking accucately enough to use as a sales tool wehearaas I am sure the semnrush overviews are gor that when they jump on a call with me to dig depper....So what we do in the free tools might be different form the mor serious client or sales work....

I have an intern that want to help and if needed I may have him make screenshots of senrsush overviews ne at a time but if this can be done agentically or with replit let me know.

Example:

Hi Lucy,

Your question is timely because a quick technical audit of your site reveals some significant opportunities that are likely being missed.

The site has a **health score of 77% (not ideal)** , and in a limited crawl of just 1,000 pages, we found over **2,500 broken internal links**. This can frustrate users and signals to Google that the site is poorly maintained, which can harm your rankings.

We also saw issues like **duplicate content** on 24 pages and **duplicate titles** on 38 pages, which confuse search engines. For example, the crawl we ran (which stalled partway through, suggesting deeper issues) shows the page for "blush" dresses is broken, leading

Tying this back to your question about AI, the audit also shows the site is missing a file called llms.txt , which is a newer best practice specifically for helping AI search engines understand your website's content.

Regarding your question on AI for TikTok and Instagram, their algorithms are primarily focused on **content discovery and recommendation**.

- **TikTok:** Its "For You" page algorithm is incredibly powerful. It analyzes video content and user behavior to decide who to show your videos to. For your store, this means creating engaging videos of your dresses, using trending audio, and employing specific has to help the AI find your target audience.
- **Instagram:** Instagram's AI works similarly to rank content in the main feed, Reels, and the Explore page. It prioritizes content that gets high engagement (likes, comments, shares, and especially saves). Using all the available features—location tags for your stor signals to categorize your content and show it to interested people.

A strong social media presence is fantastic for building brand awareness (and sends a good signal to ChatGPT etc.). People see you on TikTok, then search for you on Google. As the data shows, you get significant traffic from people who already know you and are se

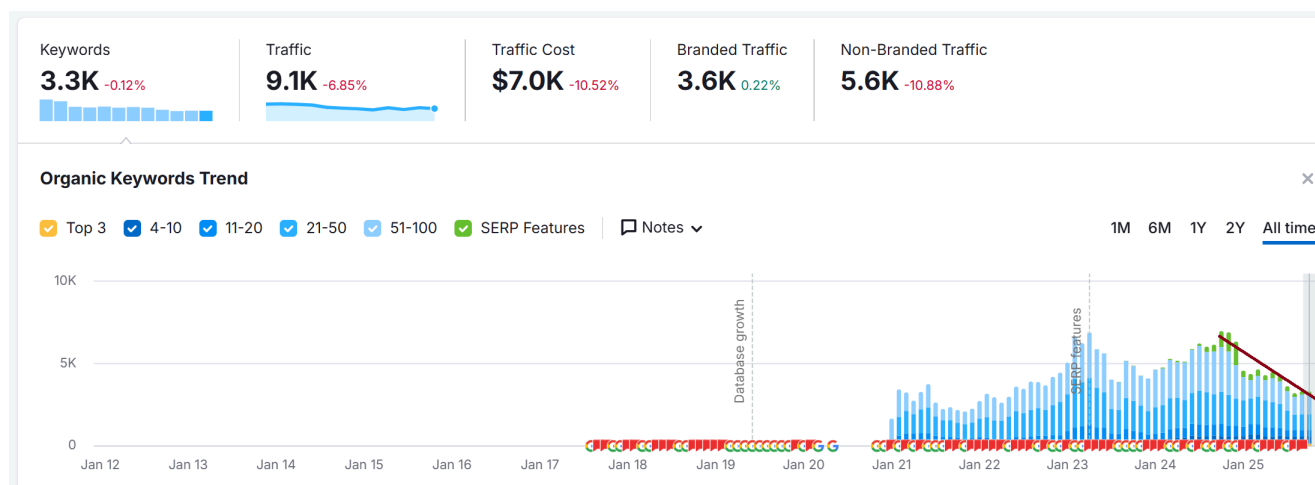

The technical issues I mentioned are what hold you back from the other side of the coin: capturing customers who *don't* know your brand yet but are searching for what you sell.

This intersection of social media, brand strength, and technical SEO is exactly what we specialize in and teach.

I'd be happy to chat for 15 minutes to discuss these findings and look deeper into the initial findings. Sometimes there are some low hanging fruit – quick fixes.

You were at about 7k keywords in the top 100 in Google last October and have less than half of that now:

Now:

Last October the traffic was worth 14k or double its current value if you bough the positions as Google cost per click ads.

Other notes:

Screaming Frog SEO crawler and analyzer has been crawling for hours and is going very slow which is a bit unusual. It also backs up tech issues like title tags that are way too long and too short (basic seo that helps get or visitors).

Just brainstorming with AI: (and note if we still add page speed - that we use one page speed number now like sconds to load not a couple gtmetrix numbers which was too much info.) – Not sure if an SEMrush inexpensive API option exists for just this not full tools or Perfect — the **Namaste Sudarshan.docx** note confirms you already framed this as a simplified proof-of-concept for him.

Here’s exactly how to proceed so it’s lean, automated, and credible:

 Step 1: Keep it Simple for Phase 1 (Top-100 SEO Snapshot)

Goal: Replace your old 20-column benchmark sheet with just **4–6 reliable metrics per domain** that can be pulled agentically or through SEMrush API.

Metric	Source	Why keep it
Organic Traffic	SEMrush / DataForSEO	Core visibility number everyone understands
Keywords Top 100	SEMrush	Directly comparable, always accurate
Traffic Value (\$)	SEMrush	Lets you say “You’re leaving \$X in traffic value on the table”
Trend 3 mo %	Calculated	Shows movement — the hook for “you’re slipping”
Pages Indexed (Google)	Free via site: query or DataForSEO	Quick site-size signal
GTmetrix PageSpeed Grade <i>(optional)</i>	GTmetrix Lite API or PSI	One glance tech-health metric

That’s all you need to recreate your “*Top Law Firm (MA) Competitive Analysis*” sheet with modern data.

 Step 2: Instruct Sudarshan (cut-and-paste brief)

Task: Build an agentic scraper (Replit + SEMrush or DataForSEO) that loops through domains in column B of the master sheet and appends these 6 columns: OrganicTraffic | KeywordsTop100 | TrafficTrend3mo_pct | TrafficValue_USD | PagesIndexed | PageSpeed_Grade
Save output as LawFirm_SEO_Overview.xlsx.

Focus on accuracy, not breadth.

- If SEMrush API returns an error → log in failed_domains.csv and skip.
- Limit to 200 API calls/hour to avoid throttling.
- Return one combined sheet so we can visually rank and highlight:
 - ▼ Trend < –15 % → Red
 - — Flat ±5 % → Orange
 - ▲ > +5 % → Green

Once that runs, you’ll instantly see which firms have **declined visibility** (your “aggressive” targets).

 Step 3: Filtering Rule = Urgent Need = Outreach List

After Sudarshan delivers the overlay, sort descending by:
UrgencyFlag = RED or ORANGE and KeywordsTop100 < 1000 or TrafficTrend3mo < –15 %.

That becomes your next **250–300 priority** firms to show the “drop chart” to.

 Step 4: Optional Screenshot Layer (intern task)

If you still want the **visual SEMrush chart** for a few VIP pitches:

- Intern logs into SEMrush → search domain → export or screenshot the *Organic Positions Trend* chart.
- Rename files “domain_trend.png” and store them in /Screenshots/ folder matching the Excel row.

Then your deck or email can show:

“You went from 7 K keywords → 3 K in 12 months (-57 %).”

 Step 5: Keep the MA vs National Split

In your Excel file:

- Sheet 1 → MA_LawFirms (eligible for WTFP)
 - Sheet 2 → National_LawFirms (Christian PI + others)
- Both use the same overlay columns so you can run one script across both.

 TL;DR Workflow

Phase	Owner	Output
1 ☐ SEO overlay (6 metrics)	Sudarshan	LawFirm_SEO_Overview.xlsx
2 ☐ Flag urgent drops	You	Filter RED/ORANGE
3 ☐ Visual charts (optional)	Intern	PNG trend charts
4 ☐ Add to Pipedrive	You / VA	Only RED/ORANGE firms
